Helping Companies Adapt for the Future!

Why Companies Want to Replicate QAD OpenEdge Data to SQL Server

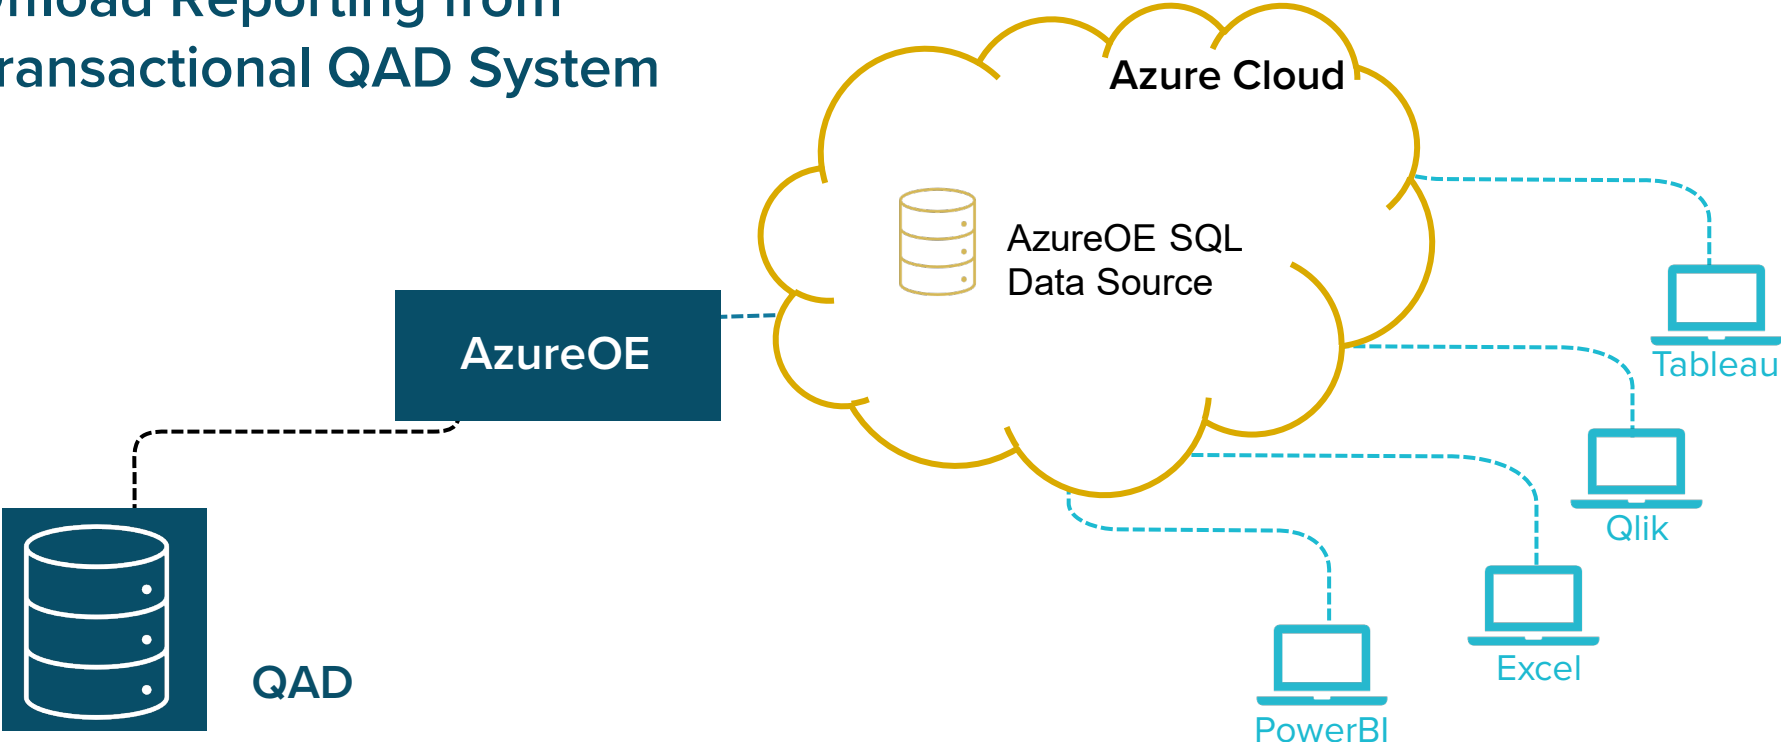

- Concerns with providing user reporting tool access through ODBC to QAD transactional system
- Comprehensive and efficient consolidated reporting capabilities
- Secure data archiving and consolidation for audit purposes
- Leverage business analytics capabilities already in place

Benefits of AzureOE

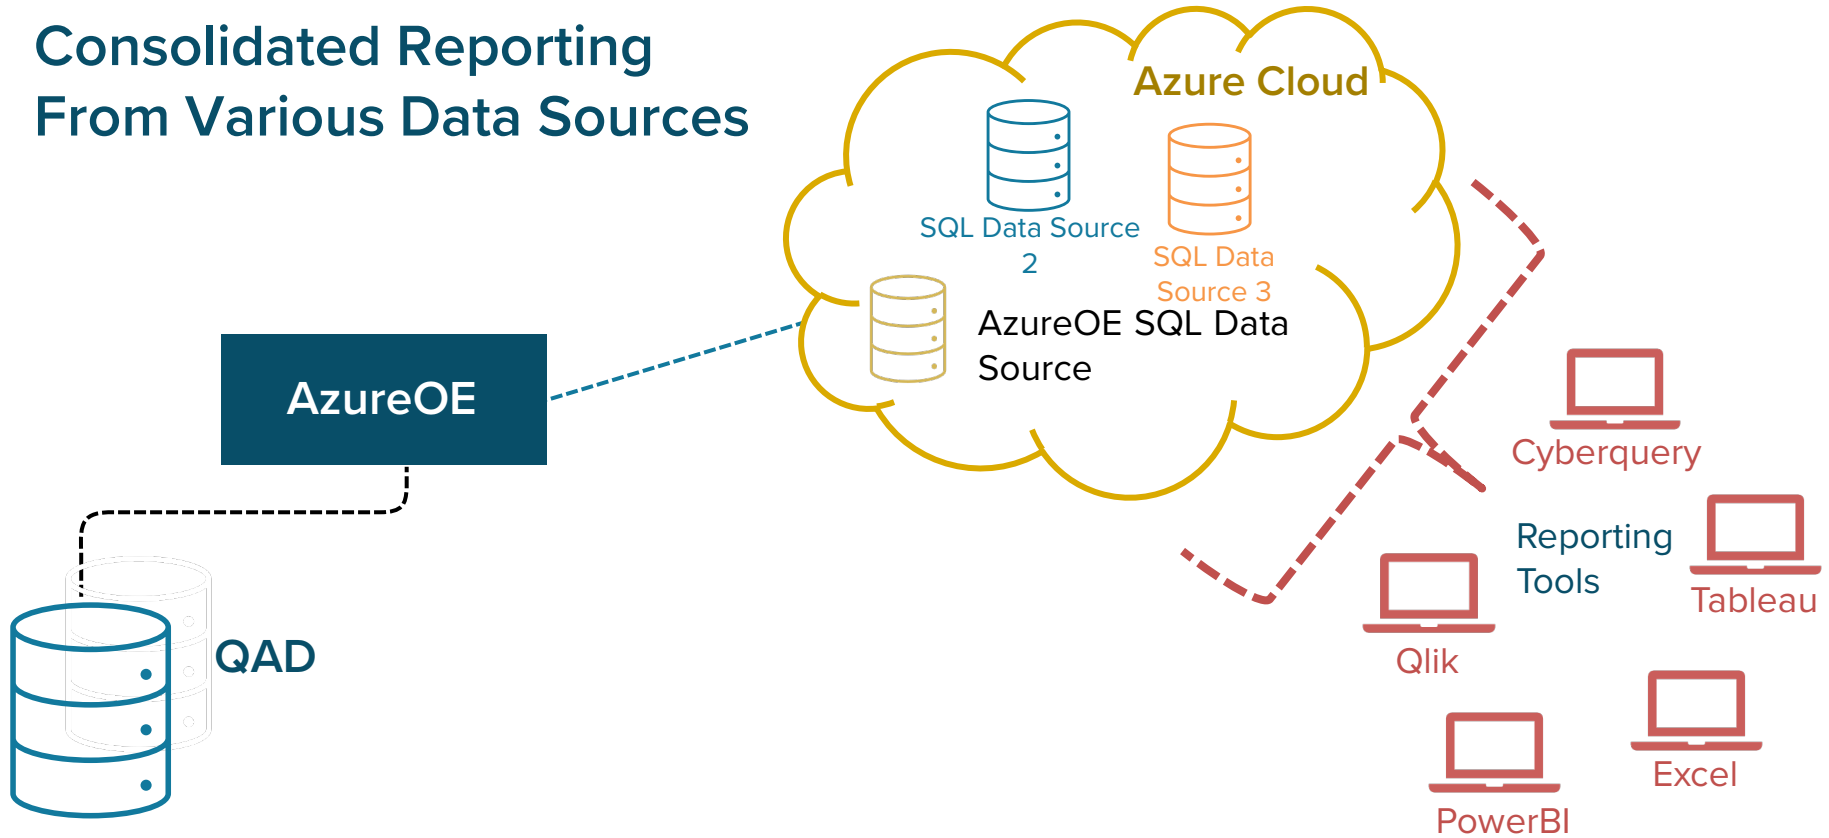

- Source Database changes flow to Target Database in real-time
- Guaranteed Delivery ensures data gets to the Target Database
- Source and Target databases do not have to contain the same schema
- Can replicate multiple databases on a single server for consolidation
- Cloud based access to leverage your existing reporting tools

Use Cases for AzureOE

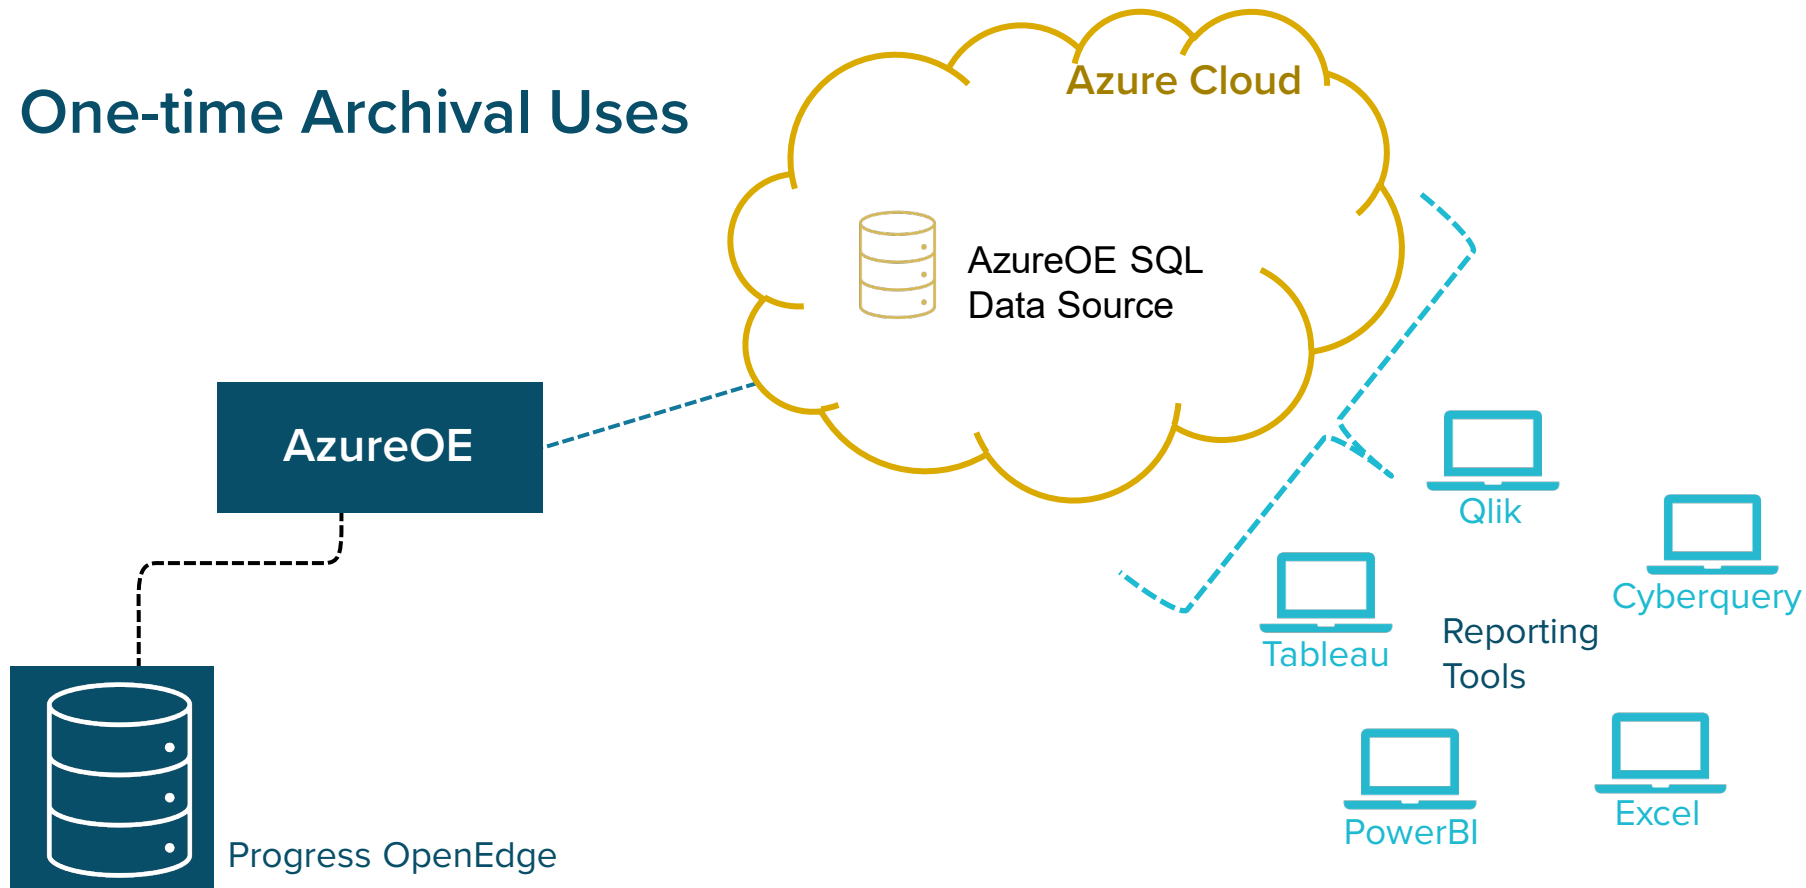

Offload Reporting from Transactional QAD System

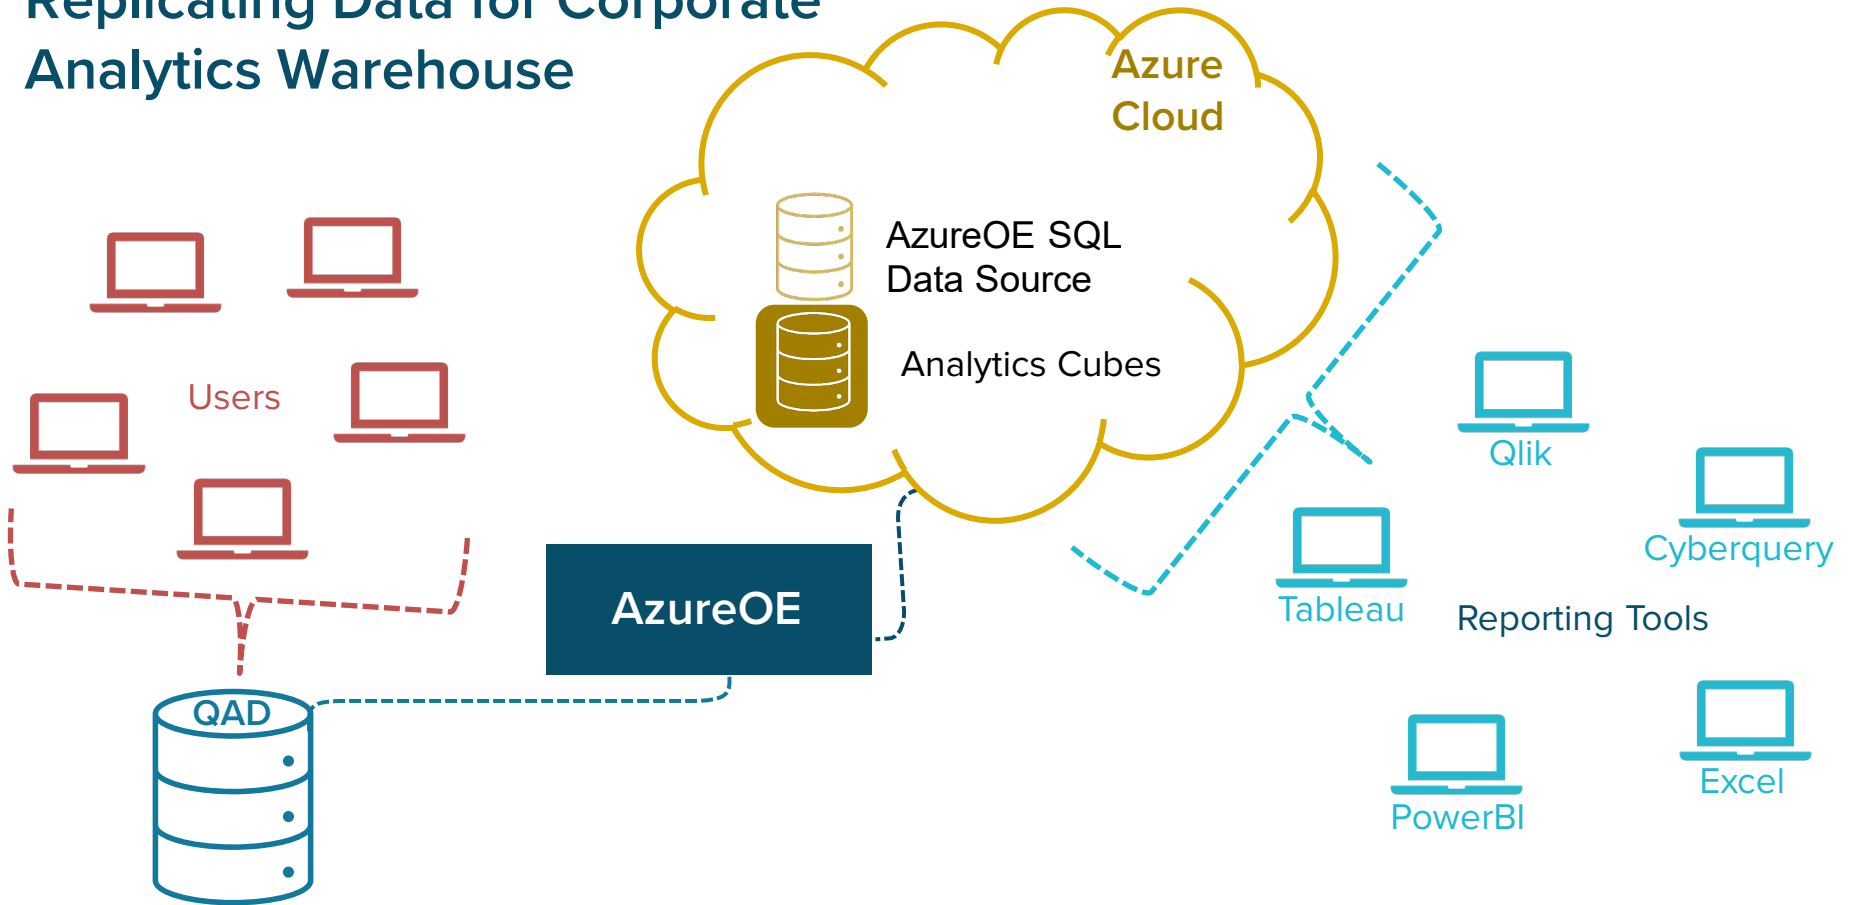

Consolidated Reporting From Various Data Sources

One-time Archival Uses

Replicating Data for Corporate Analytics Warehouse

Summary and Questions

Fast, secure, easy, real-time, cloud-based access to QAD data for reporting and analytics purposes

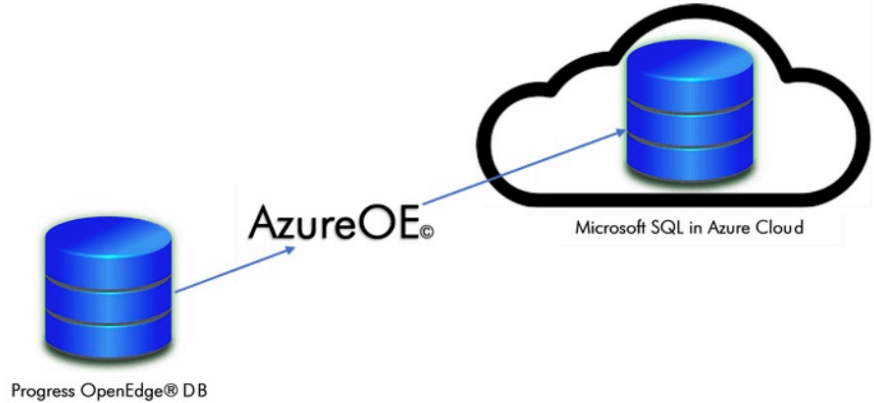

- Subscription pricing saves 50% over other solutions
- Peace of Mind with Azure Cloud
- Certified for QAD Cloud on both Enterprise and Standard Editions
- Quick time to benefit
- Cloud based access to leverage existing reporting tools
- One and best of only a few options to achieve this
